General Ledger Sub-System Interface Matrix

Purpose: This matrix summarizes each of the 20 sub-systems which interface to the general ledger. The last three columns indicate whether or not the control totals for that interface can be compared between the sub-system and general ledger.

* If manual, the sub-system must manually be interfaced to the general ledger by an operator. If auto, the sub-system interfaces to the GL without any operator involvement.
 ** Not all sub-systems are capable of generating these control totals. For those with a "no" listed, a work request has been submitted to develop a sub-system report that can be used to perform this control.

Trustee: Relative to ongoing review for continued applicability and/or updating, the trustee for this policy is Matthew McGlasson.
