Mars

Breny Cruz

Brief: Breny’s research was inspired by Metro Nashville’s Hands-on second grade science kit “Skywatchers” in which students learn about the planets, phases of the moon, and the causes for seasons and night and day.

On Mars, it is very cold almost every day. The temperature on Mars is very very cold. During winter ice caps can be seen. Space probes have landed on Mars. The dirt was found to contain clay, which was rich in iron. I would not want to live on Mars because it would be too cold for me.
