This guide describes how to enable a test for the use of the Respondus Lockdown Browser. Best practices are also included.

In order to enable the Respondus Lockdown Browser for a test, you must first have a test created and deployed in your course.

To enable the Lockdown Browser for a test:

1. You’ll first need to make the Respondus tool available in your course. Go to the Control Panel, Customization, Tool Availability.

2. On the next page, scroll down and find Respond Lockdown Browser, select the checkbox next to its name, then click submit.

3. Now, you’re ready to enable it for a test. Go to the Control Panel, Course Tools, Respondus Lockdown Browser.

4. On the next page, click the icon next to the test name and choose modify settings.
5. Next, choose to **Require Respondus Lockdown Browser** for the exam, then click **save and close**.

6. The next page will provide confirmation that Respondus Lockdown Browser is required for the test.

**LockDown Browser**

**Required**

**Best practices for the use and implementation of Respondus Lockdown Browser in your Blackboard course:**

<tbody>
<tr>
<td><strong>1.</strong> When students are taking tests outside of the classroom such as at home or in another unmonitored space, they can use a second computer or a mobile device to conduct internet searches or take pictures of the testing screen, thus rendering the LockDown browser less effective.</td>
<td><strong>DO use to provide an extra layer of security in monitored tests</strong></td>
</tr>
<tr>
<td><strong>2.</strong> This tool should be used in conjunction with the University’s honor code to encourage academic integrity and trust between students and faculty.</td>
<td><strong>DO talk about academic integrity and the Honor Code with your students</strong></td>
</tr>
<tr>
<td><strong>3.</strong> The LockDown browser can interact in unexpected ways with students’ various operating systems, ad-blockers, and malware detection software. Make sure students are aware of the potential problems and have practiced with the browser beforehand to ensure they will be able to use the browser properly in class during a test.</td>
<td><strong>DO create a practice quiz with unlimited attempts for students</strong></td>
</tr>
