Preparing Applicants for the MMI

Rev Up for the MMI presented at CAAHP 2015 – Show-Me Your Drive: Pacing Students through the Pre-Health Speedway – Kansas City, Saturday, April 25, 2015

What it is/What they need to know about the MMI

- An opportunity to demonstrate interpersonal/intrapersonal characteristics (necessary for healthcare).
- Measure communication skills, critical thinking, ethical decision-making, etc.
- Each interview/scenario may measure a different area; a question may be specific and narrow in scope.
- There are – for the most part – no right or wrong answers.
- Modeled after the OSCE (Objective Structured Clinical Examination), but in this case used to evaluate behaviors rather than clinical skills.

And what it isn’t

- A test of their knowledge of science, the body or any particular healthcare procedure or policy.
  - They will not be asked to diagnose, order tests, prescribe medicine or a course of action.
  - It is alright if they are unsure of legalities in a particular state (i.e.: parental consent for contraceptives).
- A critique of their acting skill (in the role play scenarios). “I’m not a doctor (yet), I just play one on TV”.
- A back and forth dialogue, a friendly conversation, an opportunity to “buddy up” or “butter up”.
- An opportunity for them to highlight their ________ (unless, of course, it is relevant to the topic).
- A chance to explain (or explain away) some unpleasant or less than stellar aspects of their file.

What applicants need to know...

About themselves

- Prepared to answer any behavior-based questions and ethical dilemma questions in a much longer, extensive format.
- Idiosyncrasies in their own verbal and/or non-verbal behavior that have the potential of being exaggerated in stressful and/or prolonged speaking situations.

Hot topics in healthcare

- Center for Disease Control - [http://www.cdc.gov](http://www.cdc.gov)

Evaluation

Who will be the evaluators?

- Faculty, residents, current students, retired professionals.
- Professional staff from around campus (pre-health advisors, student affairs professionals, etc.).
- Community members with an active interest in the college/school and profession.
- Evaluators usually have no background information about candidates other than their name.
How will applicants be evaluated?
- Their ability to analyze information, engage ethical dilemmas, think critically about each scenario and problem solve.
- If they actually answer the question(s) presented (as opposed to telling the story they want to tell).
- Communication skills: clear, well-thought out answers backed by examples or personal experiences.
- Non-verbal skills: eye contact, comfortable voice pattern, empathy, use of hands/gestures/posture.
- How well they (actually) listen — to the actor in role plays; to follow-up questions.
- Demonstrating an understanding and ability to discuss current social, bioethics and health care issues.
- Applicants generally receive no feedback — verbal, non-verbal, side comments, etc. — from their evaluators.

How can students practice/prepare for the MMI?
- Time simulations and experience how quickly, or slowly, does 6-8 minutes pass. Develop your sense of time management.
- Develop a mental outline that helps you analyze what the scenario is asking:
  - Gather information (read scenario, BREATHE DEEP, analyze what you might know, ask questions)
  - Establish rapport with your interviewer (listen to cues, use preferred names, good eye contact and hand shake, open body language, show empathy, patience and try to understand the value(s) involved).
  - Discuss the issue presented, while continuing to listen, gather information and maintain your rapport. You are using a balance or your academic excellence with your interpersonal and professional skills to show your strength.
- Set up a timed circuit of 6-8 mock MMI questions using a wall/corridor. Two minutes to read the question, and then face away from the question and use 6-8 minutes to respond.
- Work with a partner to role play different scenarios as well as talk about current health care issues.
- Role play how you respond when someone gets upset or disagrees with you.
- Become comfortable being cut off (mid-sentence or mid-thought) because of time constraints.
- Become comfortable receiving no feedback — verbal, non-verbal, side comments, etc. — to measure their progress; evaluators (at most schools) are instructed not to provide any feedback at all.
- Learn all you can about the school's interview process.

Where to find sample MMI questions
- University of Calgary: [http://www.ucalgary.ca/mdprogram/admissions/mmi/samples](http://www.ucalgary.ca/mdprogram/admissions/mmi/samples)
- University of Saskatchewan College of Medicine: [https://www.medicine.usask.ca/pt/admission/Practice_MMI_QuestionsUofS.pdf](https://www.medicine.usask.ca/pt/admission/Practice_MMI_QuestionsUofS.pdf)
- Multiple Mini Interview, Sample MMI questions: [http://multipleminiinterview.com/mmi-questions/](http://multipleminiinterview.com/mmi-questions/)

What happens when an interview/a scenario goes wrong
- Stay calm, breath deep, be willing to say if you misspoke and then clarify your response.
- Know this is only ONE of 6-8 opportunities for other evaluators to see you (in a different light, next time).
- Six to eight minutes and will be over before you know it. Learn what you can from this scenario then let it go and fully address the next scenario.
Who is using the Multiple Mini Interview (to the best of our knowledge)

Shared at CAAHP 2015 Kansas City 25-April-2015. Compiled by the University of Cincinnati Pre-Professional Advising Center (preproadvising@uc.edu) with significant contributions from Rice University and Williams College
