VUMC requires the following immunizations in order to observe:

1. Written documentation of laboratory evidence of immunity to rubella (German measles) and mumps: date and result. These titers are not necessary if the student/nurse/instructor received at least one dose of MMR or one dose each of Rubella vaccine and Mumps vaccine.
2. Written documentation of two (2) live measles (rubella) vaccines given no less than one month apart after the first birthday; or written documentation of a measles/mumps/rubella (MMR) vaccine since 1989, or written documentation of laboratory evidence of immunity.
3. Written documentation of completed series of three (3) Hepatitis-B vaccine, or provide written documentation of positive surface antibodies to hepatitis B, or documentation of informed refusal of the vaccine.
4. Documentation of the varicella vaccine, or a positive varicella (chicken pox) titer drawn from a reputable laboratory: date and result. Prior history of chicken pox is insufficient proof of immunity.
5. Written evidence of either a negative TB skin test within the past 12 months, or if you have had a positive TB skin test in the past, then provide a chest x-ray demonstrating no evidence of active TB, and dated within the past six (6) months.
