

Canada 2008: Democracy Survey

Technical information

<i>Country</i>	<i>Year</i>	<i>Sample size</i>	<i>Weighted /unweighted</i>
Canada	2007	2,020	unweighted

This telephone survey was carried out in 2007 as part of the LAPOP AmericasBarometer 2008 wave of surveys. The field work was conducted by Environics.

Because of the high costs of face-to-face interviews in Canada, the survey was conducted via random-digit-dialing phone calls with a total N of 2,020. Interviews were conducted in French among the French-speakers. The complete questionnaire can be found at www.AmericasBarometer.org. Readers should note that the phone survey format necessarily limited the number of questions that could be included compared to the standard AmericasBarometer survey for 2008.

The estimated margin of error for the survey is ± 2.2 . The questionnaire can be found at, www.AmericasBarometer.org
