NOTES:
1. The questionnaire was a split-sample design: approximately half the respondents were randomly assigned to "Core A" (questions marked in this questionnaire with CA) and about half randomly assigned to "Core B" (questions marked in this questionnaire with CB). Questions marked with a "T" were included in both questionnaires (Core A and Core B). Each dataset contains a variable called “core_a_core_b”, it distinguishes the questionnaire that was applied to each respondent.
