Israel	1979	490	Unweighted

This study contains data collected by the Continuing Survey of the Israeli Institute of Applied Social Research and the Communications Institute of the Hebrew University of Jerusalem. The survey encompassed a probability sample of 490 respondents representing the adult Jewish population of Israel over the age of 20. The interviews were conducted door to door, using the next birthday method in each household. The study did not cover the West Bank and Gaza.

The survey aimed to discover the attitudes of Israeli citizens toward the Arab minority in Israel. Several articles were written on the data set. All are available at www.lapopsurveys.org, and include:
