

A&S PSYCHOLOGY NEWSLETTER

Congratulations
Hyeon-seung Lee & Scott Blain!

Hyeon-seung Lee received an Early Career Investigator Award from the Schizophrenia International Research Society! He will receive the award at the annual meeting in Toronto this year.

Scott Blain who is a former member of Sohee Park's Lab (currently a post doc at University of Michigan) received the Early Career Investigator Award!

GRANTS CORNER

New NIH Requirement:

Effective January 25, 2023

Data management and sharing plans are required documents on NIH proposals that will generate scientific data.

NIH has put together a very helpful site for PI's that include what should be in a data management and sharing plan, preferred format, sample plan documents, etc. which is located [HERE](#)

An FAQ on the new policy is located [HERE](#)

The Humility in Inquiry Project has launched its three-year, \$3.4 million endeavor, funded by the John Templeton Foundation.

The project focuses on humility in inquiry—the practices and processes that encourage humble, open-minded thinking. The project's aim is to support intensive collaborations between philosophers and scientists, and ultimately to establish a new paradigm of interdisciplinary research.

A Request for Proposals seeks applications for subawards totaling \$1,300,000. Letters of Intent are due by 28 February 2023, and funding will be available for subaward teams in summer 2023. Full details are available [HERE](#)

In addition to the subawards, the project will host various activities, including a summer seminar for early-career epistemologists and psychologists, an international philosophy conference on Humility and Arrogance, and several multidisciplinary workshops. The project website will be updated regularly over the next three years as further opportunities become available.

The Humility in Inquiry Project is supported by a generous grant from the John Templeton Foundation, and is led by Nathan Ballantyne at Arizona State University and Norbert Schwarz at the University of Southern California.

WHERE ARE THEY NOW?

Neil Woodward

Neil Woodward earned his PhD in 2007 in clinical psychology. He worked with David Zald on neuropsychology of schizophrenia. He is currently Bixler-Johnson-Mayes Associate Professor of Psychiatry and Behavioral Sciences at VUMC. Neil's research is focused on understanding mechanisms that underlie disrupted brain networks in individuals with psychosis to develop effective intervention strategies.

As an Associate Professor and Bixler-Johnson-Mayes Chair in the Department of Psychiatry and Behavioral Sciences at Vanderbilt University Medical Center (VUMC), Neil Woodward is actively engaged in research, clinical service,

teaching, and administration. His lab uses multimodal neuroimaging (MRI, fMRI, diffusion imaging) and cognitive neuroscience methods to investigate the neural basis of psychotic disorders, brain development, and developmental disorders. He is also a licensed clinical psychologist and routinely conduct neuropsychological assessments on adolescents and adults with psychiatric illnesses, neurological disorders, and traumatic brain injury. His research program and clinical service serve as a platform for training researchers and clinician-scientists, from undergraduates to junior faculty. He is Director of VUMC's Postdoctoral Fellowship Training Program in Professional Psychology (APPIC membership) and Training Director for the psychosis emphasis track within the VUMC Internship in Professional Psychology, an APA-accredited clinical psychology pre-doctoral internship.
