

## How to clear the Java applications cache on user desktop:

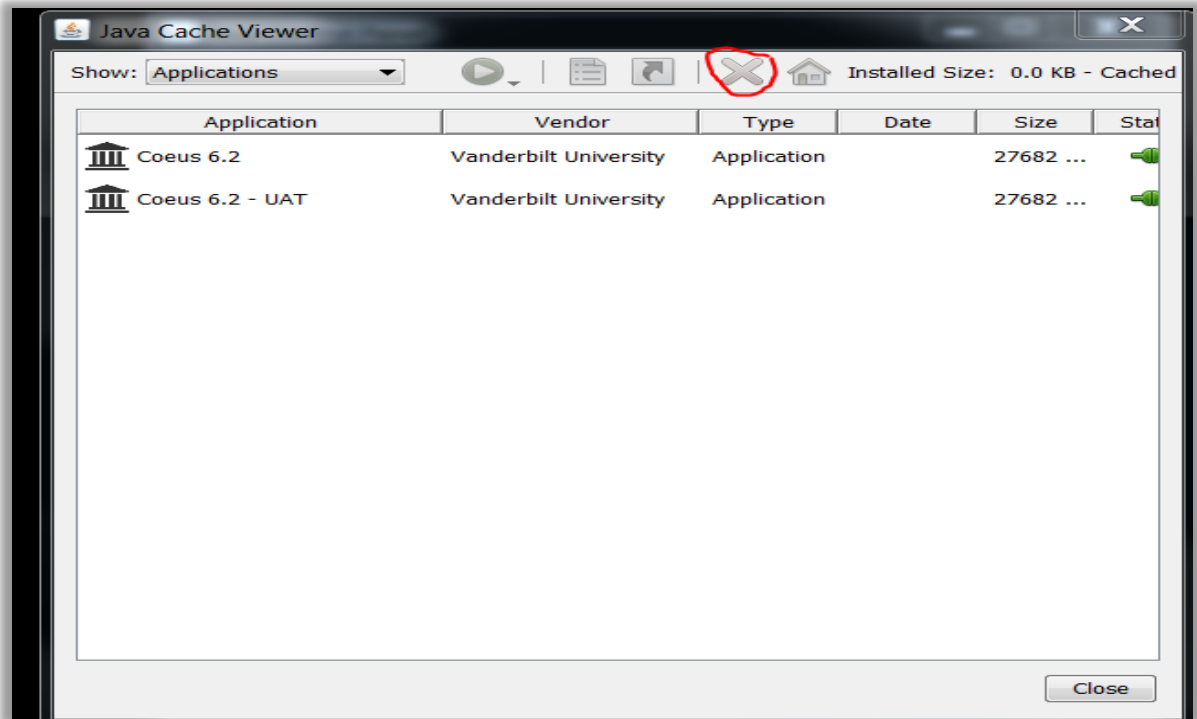

1. On the Start menu or Windows Explorer, go to the Control Panel / All Control Panel Items/and double click the Java application:

2. Click on the View button to show the list of cached Java applications on your system.

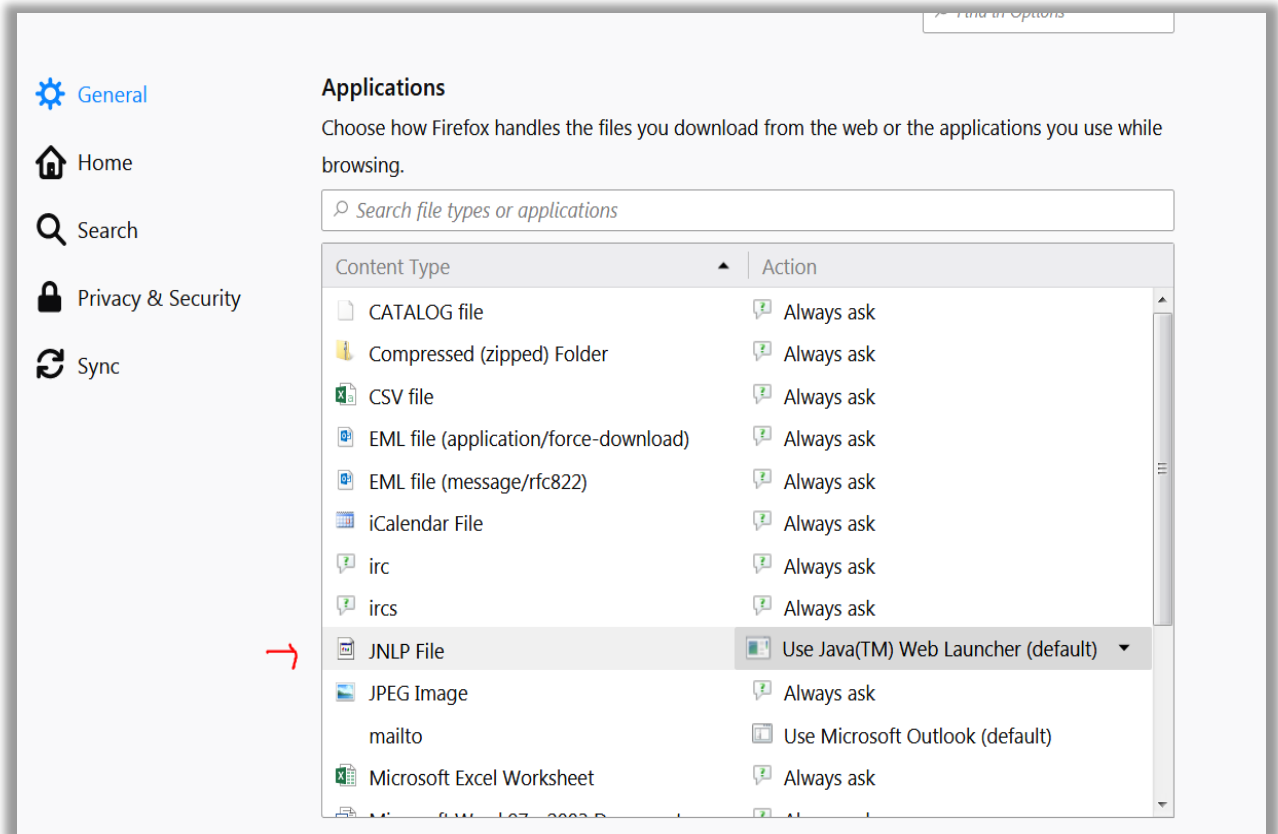

3. Delete all the cached COEUS applications by clicking on the X shown below. Close all the windows.

4. Launch COEUS from the desktop icon or by going to the launch page at <https://coeus.app.vanderbilt.edu/coeus/CoeusWebStart.jsp>. Make sure both the Coeus Premium and CoeusLite open and connect to all resources.
5. If the desktop COEUS Icon is deleted or the application does not launch but saves the jnlp file follow these steps.
1. Make sure your browser supports desktop applications.
  2. Make sure the browser setting in Firefox or Chrome have the Java Webstart application selected to launch the jnlp file.

**For example:** in Firefox, go to the Options menu on top right and scroll down to Applications:

- Restart the browser, close all open COEUS applications. Then try opening the Launch page and download the COEUS Premium application so that you get a new icon on your desktop.
- If you are still having problems, uninstall older Java version on your desktops /browsers and install Java 1.8 and try launching the application again.
